

Flexible Ducting

Description

Dasic Marine's Flexible Ducting can be used in any ducting application but especially compliments the wide range of Dasic Gas Freeing Fans. The ducting is made with a strong PVC coated nylon construction supported with an external steel spiral. Each end is capped with a robust stainless steel piece and all ducting is fully earthed ensuring no build up of static. Longer lengths of ducting can be achieved by connecting several pieces together, in this case the weight of the ducting on itself would become very large so each section has a rope tie through the centre taking the strain.

Range of Specifications Available

- Can be provided in single lengths upto 60m
- Supplied in diameters 150mm, 200mm and 300mm
- Fully continuous earthed
- Adaptor flanges to suit any application

Typical Applications

- Gas Freeing - Jetfan 125
 - Jetfan 85
 - Jetfan 70
 - Jetfan 65
- Tank Venting
- Gas Movement
- Low Pressure, Inert Gas Systems

Innovation that delivers
